About PhixFlow

PhixFlow, formerly known as CenterView Solutions Limited, provides a configurable platform for automating office tasks, fixing data problems and extending business processes to mobile devices.

Based in the technology hub of Cambridge, PhixFlow began operations in 2004 delivering a powerful combination of software and expert data consultancy to customers, doubling in size in the last 3 years.

PhixFlow’s customer base spans the retail, telecoms, healthcare, utilities and financial services sectors. The platform is being used across different business functions including customer care, legacy systems, revenue assurance, fraud detection, call re-rating, data quality, bank reconciliations, timesheet validation, straight-through billing, logistics and new business data entry.

The PhixFlow platform automates manual data-driven tasks, eliminating the potential for human error and improving process efficiencies. It flags irregularities in the data or business process and then makes the necessary adjustments or corrections. With proof of concept developments taking a few weeks and full projects typically deployed within a quarter, rapid business improvements, with a return of investment measured in months, can be implemented.

PhixFlow's no coding, "drag-and-drop", approach means that IT managers and business owners do not need to deploy people with specialist coding skills to manage the platform. This drag-and-drop functionality is used to configure forms and workflows which run detailed analytics, generate user applications and design reports.

Using this same approach, the PhixFlow platform enables a business to extend core operational capability to field teams using mobile devices. From providing task lists and capturing field inputs to enabling commission of field systems or allowing field teams to interact with the core business functions PhixFlow provides a seamless development and management platform.

And because PhixFlow is both flexible and scalable, it can easily be adapted to a variety of projects large and small. Companies including Tesco Direct, Virgin Media, Post Office, TalkTalk and Bupa Home Healthcare are using PhixFlow to drive greater cost savings and efficiencies throughout their business.
